

# Signalling Connect

TNZI signalling connect 09/2010

The international signalling transit service that assures you of reach and reliability.

Commitment to excellence.  
Experience the New Zealand can-do attitude.

- ▶ Telecom New Zealand International (TNZI) Signalling Connect provides highly reliable transit routing of Signalling System 7 (SS7) signalling messages used for international roaming, including Short Message Service (SMS) text messaging.

Signalling Connect offers you two service choices:

- 1. Signalling Transfer Point.** This service assures routing of signalling messages at Message Transfer Part (MTP) level, based on the international point code of the destination switch. It doesn't include processing at Signalling Connection Control Part (SCCP) level. You need to provide for Global Title Translation to the Destination Point Code.
- 2. Global Title Translation.** With this service, we perform processing at SCCP level and provide Global Title Translation.

Whichever option you choose, you can be sure of excellence. TNZI's international network is extensive. Added to this, our strong international relationships provide you with global coverage, allowing you to reach virtually any mobile operator in the world.

- **Worldwide.** TNZI has existing roaming signalling links set up to approximately 140 mobile operators around the world. With our extensive international network (through our Points of Presence in Los Angeles, New York, Miami, Tokyo, London, Frankfurt, Sydney, Melbourne and Auckland), we are able to set up new links to virtually anywhere in the world so you know you've got the world covered.
- **Straightforward pricing.** You only pay for what you use. All pricing is based on the number of Message Signalling Units (MSUs) sent. There are no monthly fees or fixed costs.
- **Flexible connectivity options.** The signalling link from your network to our signalling gateways can be via a TDM or IP SIGTRAN link, or via the IPX network provided in partnership with Sybase 365.

The international signalling transit service that assures you of reach and reliability.

- **Link to the Sybase SMS 365 hub.**  
The Signalling Connect service can be used to provide transit routing of SMS traffic to the Sybase SMS hub.
- **Message screening available.**  
Options are available for screening out unwanted signalling messages based on several different parameters.
- **Added assurance of an SLA.**  
You have the option of a service level agreement to give you confidence in the reliability of our service.
- **24 x 7 support.** If any services issues arise, our Business Management Centre is on hand 24 x 7, every day of the year, with both first and second-level support staff. There is no waiting, whatever your time zone. In the event of a fault, our rigorous fault-finding process ensures rapid restorations with the least disruption for your customers.

Commitment to excellence.  
Experience the New Zealand  
can-do attitude.
